DATE : October 20, 1978
TO : P. Henault
FROM : W. R. Sickler
SUBJECT : PCB Disposal Information

On October 12, 1978, Elizabeth Lundt and Peter Orser, Environmental Engineers of the SCS Engineers, Inc., a consulting engineering firm with a contract to study procedures and methods on disposal of PCB's in the electric utilities, met with Bob Eaton to discuss our procedures.

Attached for your information is a copy of their "Statement of Work" on this project which has some interesting notes on PCB's.

These Engineers were quite surprised that City Light had taken a positive step in locating and identifying equipment containing PCB as well as having a defined procedure for control and disposal and, that our schedule of labeling PCB equipment was timed to meet the federal deadline of December 31, 1978. They were given a copy of our Department Procedure on the Identification, Cleanup and Disposal of PCB's. Evidently the four or five utilities they had previously contacted did not have any program started or were in preliminary stages of setting one up with no intent of meeting the December deadline.

Mr. Orser asked if they might see a substation with a capacitor installation. Arrangements were made with the South Substation Operator to show the Engineers this station and identify capacitors, circuit breakers, transformers and other electrical equipment for them as they had no idea of the size or what the equipment looked like.
